

Customer Behavior Data Analysis Project

Made by Yash Singh Thakur

This is an **end-to-end data analysis project** where I explored customer shopping behavior using **Python, SQL, and Power BI**.

The main idea behind this project was to take a raw dataset, clean it, analyze it, and turn it into **useful insights and dashboards**, similar to what a data analyst would do in a real company.

I built this project mainly to **practice real-world data analytics skills** and add a solid project to my **data analytics portfolio**.

Skills Used

- **Python (Pandas, Jupyter Notebook)**
- **SQL**
- **Power BI**
- **Data Cleaning**
- **Exploratory Data Analysis**
- **Data Visualization**

What I Did in This Project

Data Cleaning (Python)

- Loaded and cleaned the dataset using **Pandas**
- Handled missing values and prepared the data for analysis

Data Analysis (SQL)

- Imported the data into a **SQL database**
- Wrote SQL queries to analyze customer purchases and trends

Dashboard (Power BI)

- Created an interactive **Power BI dashboard**
- Visualized customer behavior, sales trends, and key insights
